

ASPIRE Business Model Canvas

LumiSense

Secure AI workspace for inbound project and document review

PARTNERS

- ASPIRE mentors and Entrepreneurs in Residence Residence
- Early pilot teams in accelerators, university enterprise teams and innovation programmes
- Cloud / AI infrastructure partners
- Legal and IP advice for early pilots and deployments

PROBLEM

- Review teams receive messy decks, PDFs and follow-up messages with missing with missing information
- Manual review is slow, repetitive and inconsistent
- Generic AI can draft text, but it does not fit structured decision workflows or workflows or provide trusted evidence

SOLUTION

- LumiSense combines structured intake, follow-up questions and extraction in extraction in one review workflow
- It generates evidence-backed summaries and reports
- Reviewers can refine the output in chat without losing context, sources or sources or version history

COMPETITION

- Manual review using email, PDFs and spreadsheets is slow, repetitive and hard to scale
- Generic AI tools are useful for quick prompting, but they are not designed for persistent, evidence-backed review of large documents, images and video-rich submissions
- Internal low-code workflows rarely combine evidence, workflow fit and reusable history in one system

WHY YOU?

- Founder-built working prototype, not a slide-only concept
- Extraction and chunking pipeline already tested across documents, images and video
- Product thinking plus hands-on systems engineering

MARKET

- Discovery conversations confirmed pain around manual review, fragmented submissions and low trust in generic AI outputs
- First wedge: accelerators, university enterprise teams, innovation programmes and scouting teams

PATHWAYS

- Direct outreach and live demos
- Warm introductions through entrepreneurship and university networks
- Paid pilots first, then recurring subscriptions or private deployments

CUSTOMER

- Small teams reviewing inbound projects, applications or supporting documents
- Core buyer: programme lead, reviewer, scout or operations manager

UVP

- More than just an AI chat
- Handles documents, text, images and video in one evidence-backed review workflow
- Built for decision work, not casual prompting

COSTS

- Cloud hosting and storage
- Model / API usage
- Development tooling
- Pilot support and iteration time

ACCESSIBILITY & SUSTAINABILITY

- Reduces cognitive overload by turning long submissions into clear structured outputs
- Supports responsible AI through human review, evidence and clearer decision trails

REVENUE STREAMS

- Paid pilot setup
- Monthly team subscription
- Usage-based document and media processing
- Private deployment and support
- Optional custom workflow setup
